

# THE STATE OF THE IT NATION

IT spending is increasing and Gartner estimates that by 2020 it will rise to \$3.88tn. Yet despite this investment, 70% of businesses' digital transformation projects are failing. This is because:

73% don't monitor their whole IT estate

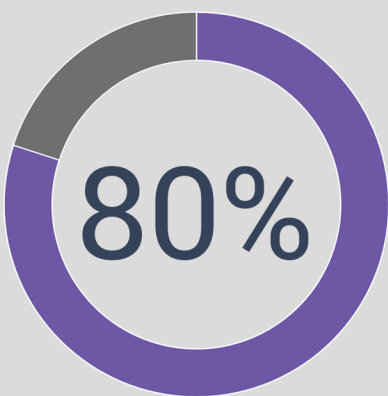

58% can't view their entire estate via a single pane of glass

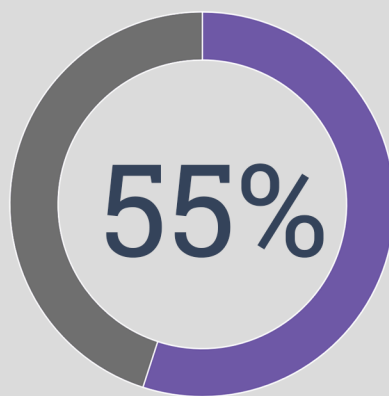

53% fail to automate IT monitoring and OPS which supports business agility

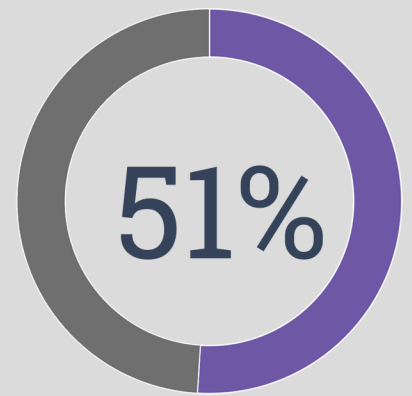

These issues cause problems like tool sprawl, IT siloes and a lack of clarity

Use between 2-5 monitoring tools

Don't have the right documentation to facilitate root cause determination and remediation

Don't share their IT dashboards to the wider business

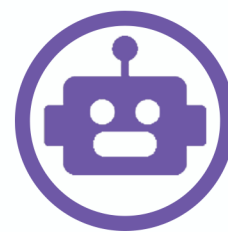

In 2020, rather than innovating, businesses need to prioritize keeping the lights on to ensure a more connected enterprise - here are their top three priorities:

42% aim to upgrade IT security and compliance

36% want to improve monitoring and observability

34% want to use automation for deploying and configuring applications

By implementing monitoring via a single pane of glass businesses could instantly:

Integrate legacy systems

Have a view of entire system health

Identify problems quickly to prevent outages

Demonstrate business value
